[REDACTED]

On 1 November 1946, a "Patente und Analysen" department was established in the Central Administration under the direction of the former head of the department for raw materials, Herr Krumrey. Its task is to register all patents applied for, to negotiate with the applicants, and to send duplicates of the material to SMA Karlshorst. The patent department of the Magistrat of Berlin also has to submit copies of all documents to the Central Administration, which thereby become available to the SMA. At present, only a few applications are on hand; however, a number of formulae for the production of special steels and hard metal alloys have been received. Applicants who submit useful material are promised either a share of profit or the construction of an experimental shop in the U.S.S.R.

This document contains information affecting the national defense of the United States within the meaning of the Espionage Act, 50 U. S. C. 31 and 32, as amended. Its transmission or the revelation of its contents in any manner to an unauthorized person is prohibited by law.

This document is hereby regraded to CONFIDENTIAL in accordance with the letter of 18 October 1978 from the Director of Central Intelligence to the Archivist of the United States.
